## **DETAILED ACTION**

## Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

- (a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.
- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-7 and 15-25 are rejected under 35 U.S.C. 102(a) as being anticipated by the Lewis et al article from the IDS.

The Lewis et al article (admissible under 102(a) since not all the authors of the paper are inventors) discloses the same magnetocaloric material as currently claimed having a coating (the same coating currently claimed) vaporized thereon. The article states such a material has improved cooling effects over non-coated materials and states on the last page that this may be due to the restriction of volume of the potentially expanding magnetocaloric material.

Claims 1,3-8,10-15 and 17-24 are rejected under 35 U.S.C. 102(b) as being anticipated by Sahashi et al '072.

Sahashi et al '072 shows a magnetic substance for magnetic refrigeration which is encapsulated in Ni, Co or Fe (see column 10 lines 55-69). Powder dimensions are given on lines 63 and 64 of column 5. Since applicant's structure is disclosed, all properties are considered inherent.

Claim Rejections - 35 USC § 103

Application/Control Number: 10/608,733

Art Unit: 3744

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 2,9,16 and 25 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sahashi et al '072 in view of Gschneidner et al.

Sahashi et al disclose applicant's basic inventive concept, an encapsulated magnetocaloric material, substantially as claimed with the exception of using  $Gd_5(Si_{1-x}Ge_x)_4$  as the magnetocaloric material. Gschneidner et al show this feature to be old in the magnetic cooling art. It would have been obvious to one of ordinary skill in the art at the time of applicant's invention from the teaching of Gschneidner to modify the magnetic cooling system of Sahashi et al by using  $Gd_5(Si_{1-x}Ge_x)_4$  as the magnetocaloric material to provide a cooling system which can provide a high degree of cooling using a relatively small magnetic field.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to William C Doerrler whose telephone number is (703) 308-0696. The examiner can normally be reached on Monday-Friday 6:30-4:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Denise Esquivel can be reached on (703) 308-2597. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
